

# WE DESIGN AND BUILD ELECTRIC CONVERSION KITS FOR GSE EQUIPMENT!

FMI can help you get extra life out of your specialty equipment by providing you with an electric conversion kit.

We are experienced at the design and installation of conversion kits on Tugs, Belt Loaders, Lavatory and Water Trucks, as well as other GSE equipment.

At FMI, we can complete all or just a portion of the design and/or installation of an electric conversion. From 24 volt to over 100 volt systems, we develop kits to meet your special equipment needs.

Our kits can include chargers, controllers, control boxes with all the switches and relays, dashes, gauges, harnesses, drive axles or any other needed parts.

We have the expertise to develop a system that works day after day in your rough environment. Our goal is to make it as simple as possible for your technicians to

install our conversion kits at your site. Or, we also offer the complete installation of our conversion kits. This service ensures fast and reliable installation of any kit we develop to meet your individual needs. This option frees up your technicians so they can be productive where they are most needed.

Kits vary in cost depending on the size of the equipment and special requirements such as accessory drives.
